Given transfer function,

$$H(s) = \frac{1}{s^2(s-2)} \quad (2.0.5)$$

$$\Rightarrow h(t) = \mathcal{L}^{-1}\{H(s)\} \quad (2.0.6)$$

$$= \mathcal{L}^{-1}\left\{\frac{1}{s^2(s-2)}\right\} \quad (2.0.7)$$

$$= \mathcal{L}^{-1}\{F(s)G(s)\} \quad (2.0.8)$$

$$= f(t) * g(t) = (t * e^{2t})U(t) \quad (2.0.9)$$

## 1 QUESTION EC-2001/Q.1.3

The transfer function of a system is given by

$$H(s) = \frac{1}{s^2(s-2)} \quad (1.0.1) \quad \text{Correct Option is (2)}$$

The impulse response of the system is

- 1)  $(t^2 * e^{-2t})U(t)$
- 2)  $(t * e^{2t})U(t)$
- 3)  $(te^{-2t})U(t)$
- 4)  $(te^{-2t})U(t)$

## 2 SOLUTION

**Lemma 2.1** (Table of Laplace Transforms).

<b>Time Function</b> $f(t) = \mathcal{L}^{-1}\{F(s)\}$	<b>Laplace transform of <math>f(t)</math></b> $F(s) = \mathcal{L}\{f(t)\}$
$t^n, n \geq 1$	$\frac{n!}{s^{n+1}}, s > 0$
$\frac{t^{n-1}}{(n-1)!}, n \geq 2$	$\frac{1}{s^n}, s > 0$
$e^{-at}U(t)$	$\frac{1}{s+a}, s+a > 0$

**Theorem 2.1** (Convolution theorem). Suppose  $F(s) = \mathcal{L}\{f(t)\}, G(s) = \mathcal{L}\{g(t)\}$  exist, then,

$$\mathcal{L}^{-1}\{F(s)G(s)\} = f(t) * g(t) \quad (2.0.1)$$

Let,

$$F(s) = \frac{1}{s^2}, G(s) = \frac{1}{s-2} \quad (2.0.2)$$

$$\Rightarrow f(t) = \mathcal{L}^{-1}\left\{\frac{1}{s^2}\right\} = \frac{t}{1!} = t \quad (2.0.3)$$

$$\Rightarrow g(t) = \mathcal{L}^{-1}\left\{\frac{1}{s-2}\right\} = e^{2t}U(t) \quad (2.0.4)$$
